STATIONARY & PORTABLE
BIOMASS RECOVERY SYSTEMS

CBI CASE STUDY - S.B. Cox, Inc., Richmond, VA

S. B. Cox started out in 1963 as a demolition contractor and now has two landfills in the Richmond, Virginia area servicing the Demolition Division and the Ready Mix Division. They have just recently opened their doors with the new C&D Recycling System. This system has been designed in phases by CBI with the intention of meeting rapidly changing market demands. The Primary screen is a large heavy duty C&D Trommel with a hexagon shape for easy screen changes and durability. The overs are then conveyed to the picking room for easy recovery of the recyclables. At this time, the picked wood is conveyed to a stock pile and a wood grinder will likely be installed at that end in the future. It is a fairly straight forward layout, but one that meets their recycling needs and reduces the amount of material going into the landfills.
